Firmware Version 01.00.02: Initial Release

Features:

- WebUI management interface
- User access control
- GigE network adapter
- pvConnect Twonky Media Server
- iTunes® server support
- Network Storage Manager
- Copy Manager
- Download Manager

Note:

This firmware release is only applicable to the My Book World Edition Home Network Storage (single drive) product.

Installing the Firmware Update

Firmware is an important set of instructions that tells your My Book World Edition device how to operate and what the interactive screens look like, as well as insures accurate functionality. Upgrading the firmware enables you to take advantage of improvements to the operation and performance of your My Book World Edition device.

Important: Make sure the AC power adapter remains connected during the firmware update. A power disruption during the update process can corrupt the system firmware.

To update the firmware: Automated

1. In Windows XP, Windows Vista or Windows 7 launch the **WD Discovery Tool** and select **Configure** to open the user interface. Mac users, use Bonjour[®].
2. Enter your admin name and password and click the **Login** button.
3. From the opening screen after you login, click **Advanced Mode** at the top of the user interface.
4. The screen will open at default System Tab view.
5. Click the **Update** button.
6. You will see two tabs Automated (default) and Manual. Leave the software in Automated mode.
7. From the Firmware Upgrade section click the **Check for New Firmware** button.
8. If new firmware is available, click the **Download** button that appears and the new firmware will be automatically downloaded.
9. Once the firmware has been downloaded, click the **Upgrade** button that appears. This process will take a few minutes. Once the upgrade process is complete, the system will reboot and return to the opening login user interface screen.

To update the firmware: Manual

1. Contact WD Technical Support to get the firmware file. Upon receipt of the firmware, save it to your PC desktop.
2. In Windows XP, Windows Vista or Windows 7, launch the **WD Discovery Tool** and select **Configure** to open the user interface. Mac users, use Bonjour.
3. Enter your admin name and password and click the **Login** button.
4. From the opening screen after you login, click **Advanced Mode** at the top of the user interface.
5. The screen will open at default System Tab view.
6. Click the **Update** button.
7. You will see two tabs Automated (default) and Manual. Click on the **Manual** tab.
8. Under the Firmware Upgrade section, enter the path to the firmware file or click the **Browse** button to locate the file.
9. Click the **Submit** button to transfer the firmware file from your PC to your network storage drive. This process will take a few minutes. Once the upgrade process is complete, the system will reboot and return to the opening login user interface screen.

Important product update notes:

1. Do not interrupt the firmware upgrade process when it is running. Doing so may cause the device to malfunction or render it unable to boot.
2. If you are using the manual update method, do not rename the firmware file or uncompress the zip file. Doing so will cause the manual update to fail.
